SUMMARY

Full Stack Software Engineer with 4+ years of experience owning multi-tenant SaaS products from architecture through production. Experienced in building backend services with Node.js, NestJS, Python, and Java, Next.js/React frontend applications, and PostgreSQL data layers, along with Redis-backed real-time and event-driven systems. Track record of shipping production AI/LLM workflows and RAG pipelines, secure Stripe and Square payment integrations, and Keycloak SSO and access control, running containerized services on Kubernetes (GCP/GKE) and AWS through GitHub Actions CI/CD. Delivered 3 production platforms and raised Playwright E2E test coverage from 5% to 70% on a core SaaS platform.

SKILLS

Backend: Node.js, NestJS, Express.js, FastAPI, Django, tRPC, REST APIs, GraphQL, Microservices, Event-Driven Architecture, BullMQ

Frontend: Next.js (App Router), React.js, React Native, Redux, Tailwind CSS, Material-UI, HTML5, CSS3, Figma

Programming: JavaScript, TypeScript, Python, Java, PHP, SQL

Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Prisma, TypeORM, AlloyDB, pgvector

Architecture: Multi-Tenant SaaS, WebSockets, SSE, Message Queues, Serverless (AWS Lambda)

Cloud & DevOps: AWS, GCP (GKE, Cloud Run), Docker, Kubernetes, GitHub Actions, CI/CD, Git, S3, RabbitMQ, Google Pub/Sub, Apache Pulsar, Terraform (basics), Vercel, Railway

AI & LLM: OpenAI API, Claude API, Vertex AI (Gemini), LLM Workflows, RAG Pipelines, Embeddings, Vector Search, Vector Databases, Prompt Engineering, Streaming Responses

Security & Payments: OAuth2, JWT Authentication, Token Authentication, RBAC, Multi-Tenancy, PostgreSQL Row-Level Security (RLS), Keycloak SSO, Stripe, Square, HelloSign

Testing & Workflow: Playwright, Vitest, E2E Testing, Integration Testing, Turborepo, Agile

AI Developer Tools: Cursor, Claude Code, GitHub Copilot, ChatGPT, Codex

EXPERIENCE

Full Stack Engineer
04/2026 - Present

Devsarch
Lahore, Pakistan (On-site)

- Owned multi-tenant SaaS applications from architecture through production on Next.js, React, TypeScript, NestJS, tRPC, PostgreSQL, Supabase, Prisma, and REST/GraphQL APIs, architecting event-driven microservices on 5 real-time and messaging technologies (WebSockets, Pusher, SSE, Redis, and message queues).
- Shipped production-grade AI/LLM workflows and RAG pipelines across 4 use cases (summarization, classification, semantic search, and automation), grounding AI responses in product and customer data through vector databases.
- Integrated 4 third-party platforms (Stripe, Square, HelloSign, and Google APIs) into secure payment and healthcare solutions, enforcing row-level security and secure data-access patterns for sensitive data.
- Deployed real-time platforms running on Python microservices with Docker and Kubernetes on GCP/GKE through CI/CD, backed by Playwright E2E and integration testing and 5 AI coding tools (Cursor, Claude Code, GitHub Copilot, ChatGPT, Codex).

Full Stack Engineer
06/2024 - 03/2026

Remote
United States

- Maintained and extended Node.js/TypeScript services for 4 core platform operations (database automation, monitoring, backups, and failover), rolled out Keycloak SSO and access control, and introduced a monorepo architecture for reusable components.
- Increased Playwright E2E test coverage from 5% to 70%, reducing production regressions, and optimized React/TypeScript UI responsiveness and dashboard performance across key platform modules.

Software Engineer
09/2022 - 05/2024

Remote
Pakistan

- Built and maintained full-stack products with React, Next.js, TypeScript, Node.js, NestJS, PostgreSQL, MongoDB, and Supabase, shipping REST APIs, real-time WebSockets/SSE features, and event-driven microservices to 4 platforms (AWS, GCP, Vercel, and Railway) through Docker-based CI/CD in GitHub Actions.

- Established E2E and integration testing with Playwright, and applied AI coding tools across 4 workflows: refactoring, debugging, test generation, and code exploration.

PROJECTS

PropToc | Property Inspection and Maintenance Marketplace

proptoc-demo.vercel.app

Tech: React Native, Next.js, NestJS, PostgreSQL, S3, LLM

- Launched a two-sided marketplace where homeowners buy property inspection plans, receive an AI-enhanced inspection report, and collect bids from vetted maintenance vendors, spanning a React Native customer app, Next.js admin and vendor portals, and NestJS services on PostgreSQL with S3 file storage.
- Designed a report engine that turns structured inspection data into server-rendered PDFs with inline photos, severity indicators, and a weighted defect score per property, with an LLM layer that cleans up inspector notes and drafts the summary.
- Implemented anonymous sealed bidding in which vendors cannot see each other or the customer, and identities are revealed only once an offer is accepted.
- Devised a milestone payment flow (50% up front, 50% on customer approval) with commission calculation on total project value, invoice generation, payout tracking, and a dispute state that holds the final payment.

Cybrology | Cyber Risk Assessment and AI Learning Platform

cybrology.com

Tech: Next.js, NestJS, BullMQ, Python FastAPI, Vertex AI, AlloyDB, PostgreSQL, Turborepo

- Led the team building a multi-tenant platform in a Turborepo monorepo: a Next.js 16 App Router web app, a NestJS 11 API, a separate BullMQ worker process, and a Python FastAPI service that owns all AI features.
- Developed a deterministic risk engine that scores organizations from 0 to 100 using a versioned question bank, server-side skip logic, passive domain checks (TLS, SPF/DKIM/DMARC, breach lookups), and standalone mini tools, with the LLM limited to narrating gaps the rule engine has already flagged so compliance output stays defensible.
- Engineered a RAG layer over course transcripts (Whisper transcription, semantic chunking, Vertex AI embeddings, ANN vector search in AlloyDB) with a structured ranking step that turns a user's risk gaps into an ordered learning path.
- Mapped answers to a NIST CSF control library with per-framework status reporting for 6 frameworks, including GDPR, ISO 27001, HIPAA, PCI DSS, and SOC 2.
- Enforced tenant isolation at 3 layers (JWT claims, a tenant-scoped base repository, and PostgreSQL row-level security) with dynamic roles over a seeded permission catalog.
- Added an LMS with hosted video lessons, quizzes, certificates, phishing simulations, and 7 locales including RTL Arabic.

Talkspresso | Creator Platform

talkspresso.com

Tech: Next.js, NestJS, Docker, Redis, PostgreSQL

- Built creator-platform features and secure REST APIs, including payment integration for transaction workflows.
- Crafted responsive Next.js interfaces and applied Redis caching to frequently accessed data paths.
- Supported Docker-based services and PostgreSQL databases for stable development and deployment workflows.

EDUCATION

BS in Computer Science

09/2020 - 06/2024

Virtual University
